

**ME354: INDUSTRIAL ENGINEERING**  
**CREDITS = 5 (L=3, T=0, P=2)**

**Course Objective:** To understand aspects like: Plant location and its selection, Optimized Plant layout and apply different concept of production planning and control. Study of productivity and Work-study, apply it in the industry for productivity improvement.

**Teaching and Assessment Scheme:**

Teaching Scheme			Credits	Assessment Scheme				
L	T	P	C	Theory		Practical		Total Marks
				ESE	CE	ESE	CE	
3	0	2	5	70	30	30	20	150

**Course Contents:**

Unit No.	Topics	Teaching Hrs.
1	<p><b><u>Plant Location Selection and Layout:</u></b>            Nature of location decision, Importance of plant location, Dynamic nature of plant location, Choice of site for selection, Comparison of location Principles factors governing flow pattern, travel chart, analytical tools of plant layout, and Quantitative methods of plant layout: CRAFT and CORELAP, Relationship diagrams.</p>	08
2	<p><b><u>Material handling:</u></b>            Principles of Material handling, Types of Material handling, Selection of Material handling equipment.</p>	03
3	<p><b><u>Productivity and Work Study:</u></b>            Definition of productivity, application and advantages of productivity improvement tools, reasons for increase and decreases in productivity            Areas of application of work study in industry, Reaction of management and labor to work study.  <i>Method Study:</i> Objectives and procedure for methods analysis, Recording techniques: String Diagram, Operations Process Chart, Flow Process Chart, Flow diagram, Man-Machine, Multiple Activity Chart, Travel Chart, and Two Handed process chart, Therbligs, Micro-motion and macro-motion study: Principles of motion economy, SIMO chart, Normal work areas and work place design.            Work Measurement: Objectives, Work measurement techniques – time study, work sampling, pre-determined motion time standards (PMTS) Determination of time standards.</p>	13

4	<b><u>Job Evaluation and Wage Plan:</u></b>	05
	Objective, Methods of job evaluation, job evaluation procedure, merit rating (Performance appraisal), method of merit rating, wage and wage incentive plans, Non monetary incentives.	
5	<b><u>Maintenance:</u></b>	07
	Basic Principles of maintenance planning, Objectives and principles of planned maintenance activity, Importance and benefits of sound Maintenance systems, Reliability and machine availability, MTBF, MTTR and MWT, Factors of availability, Maintenance economics. Maintenance categories, Comparative merits of each category, maintenance schedules, repair cycle, Total Productive Maintenance: Methodology and Implementation, Over all Equipment Effectiveness (O.E.E).	
6	<b><u>Ergonomics:</u></b>	04
	Scope and objectives of ergonomics, Man-machine interface, anthropometry, Application of human factors in engineering, Work place design.

**Course Outcomes (COs):**

1. Select appropriate plant location for the given project and to develop optimized plant layout.
2. Recommend different material handling equipment as per the requirement.
3. Apply the concepts of productivity and work-study.
4. Evaluate job and wage plans using different methods.
5. Apply the concepts of maintenance for overall equipment effectiveness.
6. Employ the concepts of ergonomics in designing of various products.
